

Enabling Safe Mass Personalization

The print world is going digital, and the collaboration between Uteco, ebeam and INX makes this reality even more tangible. At Labelexpo Europe 2017, the three partners will unveil the first industrial end-to-end digital narrow-web solution, meticulously designed and engineered by Uteco, powered by ebeam and inked by INX. Together, we enable safe mass personalization of indirect food contact flexible packaging.

Program

Get the creative freedom and versatility you've always wanted while meeting and exceeding safety standards in the marketplace and your workspace. Find out how you can open up new market opportunities.
